Project

Country Data Analysis System
Detail: Java programming language to develop an application that utilizes various design patterns to create graphical representation of data based on user selection.

Data Management System
Detail: C programming language and MySQL to create an application that utilizes a database. The application allows users to perform various tasks by accessing and manipulating the procedures stored in the databases.

Blog Web App
Detail: A project that utilized the Angular framework to create a feature for users to sign in with their login credentials. Additionally, the project allowed users to upload blogs with tags and provided a search function for other users to find the blogs based on the tags.

Portfolio Web
Detail: Single-page website that utilized the React Js to create a personal responsive to show my skill, experience and project.

Activities and Interests

Bicycling, Swimming, Travel, Movie
